

Epygi Teaches the da Vinci School About the Wonders of VoIP

The da Vinci School is a nonprofit, non-denominational organization founded in 1987, operating primarily from the tuition and fees collected each year and donations received from parents and friends of the school. The da Vinci School serves families with children from 18 months through the kindergarten and primer level. The da Vinci School's mission is to help establish basic skills through teaching methods that enhance a child's joy in learning, ability to learn, and interest in learning (a broad range of subject areas) while fostering the child's self-confidence and self-image.

Additionally, the teachers at The da Vinci School are carefully screened and selected for their abilities to nurture as well as stimulate and educate. They all have degrees in some field related to education or child development and are additionally trained by the school in the areas of brain and sensory motor development.

Bigger campus, bigger phone system

The da Vinci School recently moved to a location that is three times larger than their previous one, and they needed to decide what phone system to install in the new facility. The main issue the da Vinci School was trying to solve had to do with keeping teachers and school administrators connected in the new 22,000 square foot campus versus the old 6,800 square foot location. They were looking for the ability to have seamless communication throughout the campus with extensions in offices and classrooms, direct numbers and call forwarding.

A, B, C, D, or Epygi?

Epygi Technologies is an affordable and feature-rich option, making it an easy choice for the da Vinci School. After receiving a recommendation from their IT technician, the da Vinci School decided that Epygi would be the

best solution to satisfy their needs. PCBOTS, Epygi Technologies' Value-Added Reseller (VAR), installed the system in just one day, allowing the da Vinci School to take advantage of all the VoIP features immediately, including call transfer, call pick-up, call conferences, auto attendants, voicemail and automatic call managing when users are busy.

"With many other IP PBX solutions, the applications we were looking for required different software to be added to the system, but with Epygi, all the features were included," says Mary Ann Greene, President of the Board for the da Vinci School.

About PCBOTS

PCBOTS helps their customers achieve ROI on their technology and increase their profitability by fully utilizing their infrastructure and becoming more efficient and effective. PCBOTS solutions have been deployed all over North Texas in the areas of healthcare, insurance, banking, construction, real estate and the service industry. PCBOTS works to cost-effectively provide the simplest, most dependable and stable systems. Their solutions provide a distinct competitive advantage that helps their customers introduce new services, improve network performance, and build customer loyalty.
